Background of Scholarship:
Applications are invited for a Master’s scholarship for research into the relationships between excessive growth of aquatic plants in lowland rivers and nutrient enrichment. The project, which is part of a collaboration between the University of Waikato and the National Institute of Water and Atmosphere (NIWA), will likely involve a mix of laboratory, flume and field work, and we will favour candidates who have an understanding of plant biology or aquatic ecology. You must be eligible to enrol at the University of Waikato for a research-only MSc or able to commence the research phase of a 2-year masters degree by early 2018 or before. Start time will be negotiable, and the project has potential to be extended to a PhD programme.

Eligibility criteria:
Level: Postgraduate
Part-time or full-time candidates will be considered

Application documents required:
- CV
- Two Academic references

Contact and email address for applications or further information:
Professor Ian Hawes
