PhD opportunities in Cancer Research

Applications are invited from prospective PhD candidates interested in cancer research.

The University of Waikato Medical Research Unit has two large cancer studies – one looking at improving the diagnostic pathway for patients with colorectal cancer, and the other in looking at ensuring earlier diagnosis of lung cancer in Māori. Both projects are funded for 3 years and allow a wide scope of opportunities for doctoral level research.

The Research Unit is working closely with the Midland Cancer Network which covers Waikato, Bay of Plenty, Lakes and Tairawhiti District Health Boards.

Enquires are welcomed from individuals who have either an Honours or Masters level qualification with minimum of a second class upper division (2:1; B+ grade point average), and preferably with an understanding of the New Zealand health sector.

Please register your interest in the first instance by emailing your letter of interest and your CV to: Attention Professor Ross Lawrenson, c/o Mrs Gillian Hunn at: gillian.hunn@waikato.ac.nz.

We will contact you to discuss the opportunities in more depth after reviewing registrations.

Closing date for enquiries: Friday 29th September 2017
