Volume VII “Kyrgyzstan based on the findings of the 2009 Population and Housing Census” is the latest in a series of publications reporting the findings of the Population and Housing Census held in March 2009, and is designed for the international community.

Between November 2009 and 2011, a total of 16 publications were published providing results from the census in Kyrgyz, Russian, and English languages, both in hard and soft copies. Census findings were also disseminated on the internet. Six of the publications were in series T, nine in series R, and one in series M.

This publication contains data about the number and location of the population throughout the country; its sex, age, ethnic composition, marital status, employment and educational attainment; as well as population migration and living conditions of households.

When using statistical data in the mass media and academic publications disseminated through informational networks in hard, electronic and other types of copies, users should cite the source (Article 17 of Kyrgyz Law “On State Statistics”). Re-printing, translation, and citation are permissible only with reference to the source.

**Legends:**

- N/A;
- 0.0** negligible value;  
Minor discrepancies between totals and individual values can be explained by data rounding.

**Dear Reader!**

*This publication is commissioned by the UNFPA office in Kyrgyzstan with the purpose of disseminating the main findings of the 2009 Population and Housing Census to the international community.*

*We hope that this will facilitate understanding of the social and demographic processes that have occurred in our country since independence.*

*I would like to express our appreciation for the financial, technical, and methodological assistance provided for preparation and implementation of the Kyrgyz Population and Housing Census by the United Nations Economic Commission for Europe (UNECE), the United Nations Population Fund (UNFPA), the World Bank (WB), the UK Department for International Development (DFID), German Technical Cooperation (GTZ), and the CIS Intergovernmental Statistical Committee.*

*Special appreciation is due to Dr. Alphonse L. MacDonald, UNFPA International Consultant for the Population and Housing Census, for his highly qualified, active, and fruitful support for both census implementation and publication of this compilation.*

*I would like to thank UNFPA staff members Dr. M. Omurzakov, Assistant Representative, and Ms. T. Berdikeyeva, Programme Analyst on Population and Development, for their effective cooperation and constant support.*

*Yours faithfully,*

**A.Osmonaliev**

## I. Foreword

This compilation was prepared based on the results of the 2009 Population and Housing Census in the Kyrgyz Republic. The publication is presented in Russian and English languages.

The tables in this compilation have been put together based on those recommended by the Statistics Division of the UN Department of Economic and Social Affairs in its *Principles and Recommendations for Population and Housing Censuses (Revision 2)*.

The publication contains data on the size and location of the country's population; its sex, age and ethnic composition; marital status; and the number of children born to women in different age groups; as well as population migration. It includes information about the population's living conditions: data on the population and households by types of housing; supply of living quarters by number of rooms and household size; and the availability of the facilities important for ensuring decent living conditions and good health.

The data were provided for the republic as a whole, for its regions, and also disaggregated by urban and rural localities.

The compilation was drafted by a team of experts from the Kyrgyz National Statistic Committee led by A. Osmonaliev and including D. Baizhumanov, N. Tulegabylov, G. Mursabekova, R. Chynybaeva, L. Tekeeva, K. Koichumanova, G. Sulaimanova, M. Sorokoletova, and I. Prostatina. It is published with financial assistance from the United Nations Population Fund in Kyrgyzstan (UNFPA).

The authors would like to thank Dr. Alphonse L. MacDonald, UNFPA International Consultant, for the advice and practical assistance he provided during preparation of the report. The team is also grateful to UNFPA for the advice and financial assistance it provided during the census and with the preparation of publications based on its findings.

The Kyrgyz National Statistic Committee has previously published compilations on the following topics:

		<b>Date of publication</b>
Volume I	Main socio-demographic characteristics of the population and number of households	December 2009
Volume II Part 1 (series T)	Kyrgyz population	May 2010
Volume III (series R)	Regions of Kyrgyzstan – 9 compilations: R1 Batken oblast                                    R6 Talas oblast R2 Jalal-Abad oblast                              R7 Chui oblast R3 Issyk Kul oblast                                R8 Bishkek city R4 Naryn oblast                                     R9 Osh city R5 Osh oblast	IV quarter 2010
Volume II Part 2 (series T)	Economic activity and employment of the Kyrgyz population	December 2010
Volume II Часть 3 (series T)	Migration of the Kyrgyz population	December 2010
Volume V (series T)	Households and families in Kyrgyzstan	June 2011
Volume IV (series T)	Housing and living conditions of the Kyrgyz population	October 2011
Volume VI (series M)	Main organisational and methodological provisions	December 2011

## **II. History of censuses in Kyrgyzstan**

A population census was conducted for the first time in the territory of modern Kyrgyzstan in 1897 as part of the Russian Empire. This census only covered some districts and towns.

The first National (all USSR) Population Census was conducted in August 1920, but it only covered 72 per cent of the population of the Soviet Union (which included Kyrgyzstan). In practice, the first population census that comprehensively covered the territory of Kyrgyzstan was the 1926 All-Union Population Census of 17 December. Following 1926, another five population censuses were conducted within the territory of the country: in 1939, 1959, 1970, 1979, and 1989.

After the 1989 Census, some fundamental changes occurred: first, the Soviet Union had collapsed, and sovereign states were established on its territory; second, the political system changed in these sovereign states; and third, major demographic, social, and economic changes occurred affecting the composition and structure of the population of the sovereign states.

The economic transformation has affected people's attitudes to some values, their reproductive practices, the nature and scope of migration, and the profile of migrants. This could not but impact on the location of the population, its composition by sex and age, educational attainment, sectoral and professional status, employment, and so on.. To obtain data on these variables and the changes that had taken place required a general population census.

On 24 March 1999 Kyrgyzstan carried out its First National Population Census as a sovereign state. This census revealed that the resident population was 4,822,900 persons. This census gathered information about Kyrgyzstan's population that was crucial to develop government forecasts on socio-economic development, to enumerate the size and composition of the population, to study location and use of labour resources, and to conduct scientific research.

In accordance with Presidential Decree 661 "On the 2009 Population and Housing Censuses in the Kyrgyz Republic" of 29 December 2005, a population and housing census was conducted between 24 March and 2 April 2009 within the territory of the Kyrgyz Republic. This was the second national population census, but the first which covered not only the population but also housing.

The above-mentioned Decree identified the National Statistical Committee as the agency responsible for the 2009 population and housing census. In this context, the National Statistical Committee of the Kyrgyz Republic, in partnership with state administrations at central and local level, carried out a range of activities to provide legal, methodological, organisational, financial, and logistical support for the census, process the data obtained, analyse, summarise and disseminate the findings.

As of 24 March 2009 the total population resident in the Kyrgyz Republic was 5,362,800 persons.

### **III. Organisation of the 2009 Population and Housing Census**

#### **Legal bases**

The legal bases for the 2009 Population and Housing Census in the Kyrgyz Republic were:

- the Constitution of the Kyrgyz Republic;
- the Law of the Kyrgyz Republic of 26 March 2007 “On State Statistics”;
- the Law of the Kyrgyz Republic 59 of 19 April 2008 “On the Population and Housing Census” which regulates legal relationships during preparation and implementation, processing and storing of personal data of persons interviewed and housing, and publication or dissemination of the final data obtained from the Census and other socio-demographic surveys of Kyrgyzstan’s population. In addition, the Law sets out the fundamental definitions and units of enumeration used for the Census, methods of implementation, and specificities for the Census concerning particular population groups. According to this Law, the Census in the Kyrgyz Republic should be performed every ten years within the period of the round of global population censuses. The housing census may be conducted simultaneously with the population census. Population censuses are mandatory and respondents cannot refuse to communicate data required on questions included in the Census. They bear responsibility under Kyrgyz legislation for refusal. At the same time the population is guaranteed confidentiality of all personal data. Specific clauses of the Law set out the procedures to follow and sources for funding the Census.
- Kyrgyz Presidential Decree 661 of 29 December 2005 “On implementation of the 2009 Population and Housing Census in the Kyrgyz Republic”. This Decree established that the next census of population and housing within the Kyrgyz Republic would take place in 2009. The Government, together with the National Statistical Committee, was instructed to ensure complete and timely implementation of the population and housing stock census, taking into account financial support from the national budget and grants from donor countries.

#### **Legal framework**

The legal framework for the 2009 Population and Housing Census in the Kyrgyz Republic was as follows:

- Kyrgyz Government Resolution 396 of 31 May 2006 “On preparation and implementation of the 2009 Population and Housing Census in the Kyrgyz Republic”. This Resolution was the key legal regulation that defined the timeframe, procedures, and means of preparation and implementation of the 2009 Population and Housing Census. Under this Resolution, it was established that the census implementation period would be 24 March to 2 April 2009, and that it would take the form of personal interviews by specially trained enumerators. The National Statistical Committee, ministries, state committees and administrative agencies of the Kyrgyz Republic, as well as state administrations at central and local levels, were charged with the implementation of a number of activities, to be followed by submission of information to the Government. The Resolution mandated that all citizens of the Kyrgyz Republic, foreign citizens and stateless individuals residing in the country, and citizens of the Kyrgyz Republic abroad, including those registered with the country’s overseas institutions, are subject to the present Census, along with all places of residence within the Kyrgyz Republic.

In addition the Resolution identified the procedure, timeframe and size of remuneration for all categories of mobilised census staff, for preparation and implementation of the Census, and for processing data.

On the basis of this Resolution, state administrations at central and local levels established regional, district, and municipal headquarters to prepare for and implement the Census. These offices provided practical assistance and supervised preparation and implementation of the Census in the field. State administrations at central and local levels drafted and approved relevant action plans;

- Kyrgyz Government Resolution 195 of 25 May 2007 “On approval of the questionnaire for the 2009 Population and Housing Census in the Kyrgyz Republic”. Taking into account the fact that the Kyrgyz Government is the primary user of census information, the census instrument (questionnaire) to be used for data collection was approved officially at government level for the first time (Form 1 “Census Questionnaire: List of Residents”, Form 2 “Census Questionnaire: Population”, Form 3 “Census Questionnaire: Housing”).

### **Census instruments (questionnaire)**

Three standard questionnaires were developed (see Annex with Questionnaires) to collect information about housing units, households, family members, and the present and usual resident population. The questionnaires were produced in three languages: Kyrgyz, Russian, and English. The use of language version for data gathering was determined by the language chosen by respondents.

Form 1 “Census Questionnaire: List of residents within the living quarter” contained eight questions to gather information about the currently resident and usual resident population, and the number of households. Answers to these questions also provided information to help establish migration of members of households, i.e.:

- about persons who are residents but temporarily absent – answers to questions about the length of and reasons for their absence were given by household members that were available;
- about persons who are temporarily staying in the household – answers about the length of and reason for their absence from their usual residence were provided.

Special provisions were made for receiving information about persons who are not residents of Kyrgyzstan.

Form 2 “Census Questionnaire: Population” contained 18 questions to establish the demographic, economic, educational, and geographic characteristics of every single respondent. The enumerator completed this form individually for each person recorded in Form 1 “Census Questionnaire: List of residents”.

Form 3 “Census Questionnaire: Housing” contained 13 questions. Questions 1 to 5 were used to reveal the characteristics of the housing structures. This included classification of living quarters by type, number of floors, materials of outside walls, the period of construction, and its seismic stability. Questions 6 to 10 were completed for each housing unit: type of living quarter, occupancy of living quarters, types of facilities, size of living area occupied, and number of rooms. Answers to Questions 11 to 13 were completed for each household living in the living quarter: ownership, area of housing, and number of rooms occupied.

## **Methodological support**

In preparation for and implementation of the 2009 Population and Housing Census, the principle of a single statistical methodology throughout all the country was strictly observed, as established in the legal regulations governing the Census.

The key methodology for preparing for and implementing the Population Census were developed in line with national and international best practice in population censuses, and with recommendations provided by the United Nations on these activities.

### ***Population categories to be enumerated***

The Population Census was implemented through a survey of living quarters and non-residential premises which could be inhabited. In all premises all persons permanently (usually) living there, including those who were there temporarily and those who were absent at the moment of the Census, were subject to enumeration.

***Permanent (usual) residents*** are the persons who permanently spent most of their time (usually) in this living quarter or nonresidential premise.

Foreign citizens and stateless individuals who permanently live in the Kyrgyz Republic were enumerated at the place of permanent residence (their usual place of residence in the republic) under the standard procedure.

Persons, regardless of their citizenship, who arrived in the Kyrgyz Republic seeking employment (apart from foreign citizens employed in the missions of foreign states and international organisations) or for study or other purposes for periods of one year or more, were enumerated in the same manner as residents of the Kyrgyz Republic at the addresses where they usually stay in the Kyrgyz Republic.

***Temporary residents*** are individuals whose usual residence was outside the settlement where they were found at the moment of enumeration, provided that their absence from their place of usual residence did not exceed one year.

Persons who came for temporary or seasonal employment within the Kyrgyz Republic and stayed at the settlement for over one year **should be enumerated**, and these persons were not counted as temporary residents, but as usual residents.

***Temporarily absent*** persons at their usual residence were defined as Kyrgyz citizens who were outside the territory of the settlement, where they permanently (usually) lived at the moment of enumeration:

- persons who left the country for temporary or seasonal employment; business travel, for vocational training; to visit relatives and acquaintances; or for other purposes, provided that their absence did not exceed one year;
- citizens of the Kyrgyz Republic who left the country for temporary or seasonal employment or for other reasons, if their absence from their place of usual residence did not exceed one year;
- persons who live in this quarter and left the country for business travel, for employment, study or other reasons for one year or more, and expect to return afterwards; or
- persons staying in pretrial facilities as well as those arrested under administrative procedure for periods of up to 15 days, even if their place of usual residence was in the same settlement.

### ***Enumerators did not cover:***

- citizens of the Kyrgyz Republic who left the country for extended official travel of one year or more to work for diplomatic, trade, and other missions of the country abroad, as well as members of their households living with them. This group was enumerated by missions and consulates based on instructions from the Kyrgyz Ministry of Foreign Affairs;
- persons in pretrial detention with respect to whom court decisions have come into force , as well as persons serving sentences in places of detention. This group was enumerated by the corresponding departments of the Kyrgyz Ministry of Justice;
- military personnel, conscripts, special population groups, and other persons residing in closed areas and facilities to which access is limited by an established system of special passes. This group was enumerated at their places of residence by the authorities (ministries and agencies) responsible for these closed areas (facilities).

### ***Not included in the census:***

- foreign citizens employed in missions of foreign states to the Kyrgyz Republic and members of their households;
- foreign citizens employed in missions of international organisations; and
- foreign citizens that came to the Kyrgyz Republic in a team of delegates from foreign states or international organisations.

### **Organisational logistics**

The 2009 Population and Housing Census was implemented by central, lower-level and territorial branches of the Kyrgyz Republic's National Statistical Committee (NSC), supported by central and local civil service branches. The NSC's Population and Housing Census Unit, supported by the Demography Statistics Unit, the Social and Environmental Statistics Unit, and the Labour and Employment Unit, were responsible for developing the census methodology, logistics, and analysis of findings.

Preparation and implementation of field activities for the Population and Housing Census was assigned to territorial branches of the NSC under the general management of the Population and Housing Census Unit. These territorial units of the NSC carried out all activities scheduled, including:

- registration of living quarters and non-residential premises where people may live. Based on the outcomes of this registration and on refinement of administrative-territorial borders, 545 enumeration units, 2,816 instructor stations, and 13,816 enumeration districts were established;
- selection and training of qualified census staff. Over 21,000 trained specialists participated in preparation and implementation of the Census;
- coordination and supervision of implementation of the Census *in-situ*, supervising the post-enumeration survey, and so on.

### ***Census method***

The 2009 Population and Housing Census was conducted using the interview method (UN, M67 rev. 2, 2008, p.18). This is the standard procedure for censuses in Kyrgyzstan. The enumerators are tasked to receive information about all members of households within the enumeration district assigned to them. Collection of personal data was carried out by census

staff by means of interviews with each adult in the living quarters in which respondents resided, as well as nonresidential premises where people may live.

### ***Census period and date***

The Population and Housing Census was carried out during the period 24 March to 2 April 2009 throughout the country. The Census moment for the 2009 Population and Housing Census was midnight of 23 March 2009..

### ***Quality control measures***

Quality control measures were taken in every enumeration district to prevent exclusion error, incomplete coverage or double enumeration. Persons who at the time of the Census were temporarily residing in other places than their households and for whom it was not possible to get any information at the place of residence were sent ‘Notifications’ at their place of permanent residence for verification. In order to avoid double enumeration of persons who were not at home at the moment of the census, as well as persons with multiple places of residence, these persons were given “Certificates of Census Completion” after their enumeration sheets were completed.

As a quality control measure every tenth household (10 per cent) in every enumeration district was revisited and re-interviewed. The revisit and re-interview was conducted by the Deputy Head of the Census Unit in the presence of an instructor supervisor and an enumerator. This approach was primarily for quality control rather than assessment of the completeness of the census i.e. the focus was on reduction of errors rather than the assessment of their magnitude. The revisit and re-interviews were conducted throughout the country from 3 to 5 April 2009. In order to avoid double enumeration of the population, ‘Notification’ documents and ‘Certificates of Census Completion’ were used during the fieldwork.

During the revisit and re-interview, each sampled household was checked to discover persons missed or mistakenly recorded by the enumerator. For this purpose, the number of persons subject to enumeration was identified by a roll collation of their availability under Form 1 “Census Questionnaire: List of residents” and Form 2 “Census Questionnaire: Population”, while verifying the accuracy of records about temporary absence or temporary stay. Meanwhile the population enumeration and the record of temporary absence or temporary stay was fixed to cover midnight of the night of 23-24 March. Persons subject to enumeration within this household but overlooked by the enumerator were added to Form 1 “Census Questionnaire: List of residents”, and Form 2 “Census Questionnaire: Population” was completed for them in turn.

If persons who were not subject to enumeration within this household were erroneously recorded (such as conscripts, people who had left to study, or those who had moved to another place of usual residence), these people were removed from Form 1 “Census Questionnaire: List of residents” and the reason for exclusion was indicated, for instance: “Recorded by mistake: conscript” or “left for studies”, and they were also removed from Form 2 “Census Questionnaire: Population”.

### ***Population groups to be enumerated***

During the enumeration period the following information was considered:

- Data about citizens of Kyrgyzstan who actually stay in the country, as well as those who are temporarily absent. For the latter, the period and reasons of absence were taken into account and the place of temporary residence indicated;
- Data about stateless persons who live in the Kyrgyz Republic;
- Data about foreign citizens (students, labour migrants and so on), who were residents or temporarily living in Kyrgyzstan, excluding foreign citizens employed in the missions of foreign states to the Kyrgyz Republic, or foreign representatives and officers of international organisations, and members of their households living with them.

The information above mentioned was used to differentiate two population totals: the number of persons currently in the area (UN, M67, 2008, p.114-115) and the usual resident population (UN, M67, 2008 p.113, and p.241):

- **Present population** includes all usual and temporary residents, whether Kyrgyz citizens, stateless persons, or foreign citizens, enumerated at the place where they stayed at the moment of the census. Usual residents who were out of the country at the moment of the enumeration were excluded from the present-in-area tally.
- **Usual resident population** comprises all persons resident at the moment of the census as well as those temporarily absent from their place of permanent residence for less than one year. However, the 2009 Population and Housing Census also enumerated residents who had been abroad for more than one year but intended to return to the country as part of the usual resident population. With regard to the latter category, information about their intention to return was given by their relatives.

### **Post-script**

The 2009 Population and Housing Census in the Kyrgyz Republic was the second census implemented by the National Statistic Committee (NSC) since independence in 1991. Census-related preparation activities began in 2005. Methodologies proposed by the United Nations and best practice on population censuses were utilised.

Taking into account the scale and complexity of the Census as well as certain difficulties with securing funding from the national budget for quality census preparation and implementation, the NSC turned to a number of international organisations and donor countries with a request for financial and technical support for implementation of this crucial political, social, and administrative activity for the country.

As a result of significant efforts by the NSC leadership to mobilise funds financial, technical, and methodological assistance was obtained from the United Nations Population Fund (UNFPA), the United Nations Economic Commission for Europe (UNECE), the United Kingdom Department for International Development (DFID Office in Kyrgyzstan), German Technical Cooperation (GTZ), the World Bank, and the CIS Intergovernmental Statistical Committee.

UNFPA supported missions of international consultants on Population and Housing Censuses, Dr. Alphonse L. MacDonald and Mr. Paolo Valente. In the framework of this, the NSC was advised on assignment of tasking for a census questionnaire data-entry programme, logical control, adjustment, and tasking for standard output tables. Taking into account the advice provided, the NSC elaborated and drafted output publication tables to publish the census findings. Particular attention was paid to the issue of ensuring comparability of the output tables with international standards.

The methodological framework for the Census and Action Plan were developed by NSC staff taking into account international recommendations and standards. The Census-related Action Plan was elaborated pursuant to an assumption of sufficient funding being available for the Population and Housing Census. Nevertheless, the external material and financial support and technical assistance required was not received to the extent required, and so the methodology and Action Plan were adjusted to reflect the financial resources available. As a result, adoption of expected innovations to population census methodology was not possible. Nevertheless, preliminary evaluations of data quality were positive, and a comprehensive programme of publications was completed. The Programme was based on national needs, and publications were published to schedule in Kyrgyz, Russian, and English .

## **IV. Tables**

- 1. Demographic and social characteristics**
- 2. Geographical characteristics**
- 3. Characteristics of international migration**
- 4. Fertility and mortality**
- 5. Educational characteristics**
- 6. Economic characteristics**
- 7. Households and families**
- 8. Housing characteristics**

## **1. Demographic and social characteristics**

This section enumerates both the usual resident population and the present population. The data is disaggregated by sex both nationally and regionally. There are also data on temporary resident and temporary absent populations.

The total usual resident population by different age groups and sex is given both at the national level and for each region (oblast), and is further disaggregated by urban and rural area.

From time immemorial Kyrgyzstan has been a multiethnic state in which, according to the findings of the 2009 Population and Housing Census, members of over 100 ethnic groups live. In the census, ethnicity has been registered on the basis of the free self-declaration of respondents, and the ethnicity of children has been reported by their parents.

Data on the composition of the urban and rural population for the twelve largest ethnic groups have been presented disaggregated by age groups both nationally and regionally.

The section also provides data on the marital status of males and females 15 years of age and older, nationally and regionally.

The population census data have been prepared in accordance with the Family Code of the Kyrgyz Republic (2003) and the Law “On Statements of Civil Status” (2005).

The following **categories of marital status** were defined (individuals 15 years of age and older were questioned on their status without having to present personal identification documents):

- never married (single);
- officially married;
- unofficially married;
- widower (widow);
- divorced; and
- separated.

**Marriage** is a relationship between a man and a woman which determine the rules and duties in relation to each other and to their children. If relations between a husband and his wife are officially registered (by the Civil Status Registration Authority), they are official. If they are not registered as such, the marriage is considered unofficial. As in many other countries, persons may marry before 18 years of age by obtaining permission to marry from local administrations for valid reasons, and also often without registration by the Civil Status Registration Authority. In order to study this phenomenon, the 2009 Population and Housing Census and 1999 Population Census include a special category for individuals in unregistered (consensual) unions.

**A widower (widow)** is an individual who has been married, but whose marriage terminated because of the spouse's death.

**Divorce (marital breakup)** is the ultimate juridical termination of a marriage between spouses, which allows the parties to remarry. The marriage shall only be considered dissolved after registration of the divorce by the Civil Status Registration Authority.

**Separated** persons are individuals who were earlier married but at present do not have a mutual household relationship, but with regard to whom dissolution of the marriage has not yet been registered by the Civil Status Registration Authority. They also include individuals, who were earlier in a consensual marriage but now are separated.

**1.1. Present population and usual resident population by sex for major administrative divisions and area**

(persons)

	Present population						Usual resident population					
	Total			Including temporarily resident			Total			Including temporarily absent

## **2. Geographical characteristics**

The Kyrgyz Republic consists of seven oblasts and two cities (including the capital of the country). Each oblast is made up of rayons (districts) and towns, urban-type settlements, and village districts, which in their turn integrate rural settlements.

Law 65 “On the administrative-territorial structure of the Kyrgyz Republic” of 25 April 2008 codifies the territorial division of the Kyrgyz Republic. According to this Law, a village district is a territorial unit made up of one or more villages, in which the local community carries out the function of local self-government in the manner established by the Kyrgyz Constitution and legislation.

The Kyrgyz Republic’s population is distributed unevenly around the country’s territory. The urban population of the republic lives in 25 cities and towns, 28 urban-type settlements, and three villages. Over 90 per cent of the urban population lives in cities/towns, with the rest in settlements and villages. The rural population lives in 440 village districts (local communities) which are made up of 1,834 villages.

This section contains data based on the administrative territorial divisions of the country, and provides data on the distribution of the resident population in localities by size of locality and gender.

Distribution of the population into urban and rural is determined by place of actual residence. **Urban** localities are defined as localities officially recognised as cities/towns, urban-type settlements, and villages. All other localities are defined as **rural**.

Data on the number of temporarily-absent persons by reasons for and length of absence are presented for the first time.

## Administrative and structure of the Kyrgyz Republic by districts, towns and cities

### **3. Characteristics of international migration**

The data provided in this section reveals the level of international migration.

The section presents data on the flows and lengths of migration from other states. Migrants are disaggregated by sex, age, and by nationality. Data is given both at national level and by region.

**Migration** is the movement of individuals for various reasons from the Kyrgyz Republic to other states and from other states to the Kyrgyz Republic, as well as movement within the territory of the Kyrgyz Republic, which involves a change in the place of residence. Migration can be external or internal:

**External (international) migration** is the movement of individuals into or out of the territory of the Kyrgyz Republic. The terms “**immigration**” and “**emigration**” are used with regard to external migration.

**Internal migration** is the movement of Kyrgyz citizens for various reasons within the territory of the Kyrgyz Republic with the aim of changing their official place of residence. Internal migration can be further divided between that from one region (oblast) to another (interregional), and that from one district (or town) to another within the same region (inter-district).

**A migrant** is an individual who engages in a migration process. Migrants are those persons who have changed their official place of residence from the territories which they have left to the territories in which they have settled.

Map №2

## Migration of urban and rural population by place of arrival during all years of life

#### **4. Fertility and mortality**

This section provides data on the level of female fertility by age group. All females aged 15 and older (irrespective of marital status) were asked about the children they have given birth to. The section presents data on children born; children still living, and children who have died disaggregated by sex and the women's age groups. The overall fertility rate at the date of the census is provided.

The **fertility rate** is calculated as the total number of children ever born divided by the total number of women.

Before 2004, the national criteria for live births differed from the criteria recommended by the World Health Organisation (WHO), and somewhat understated the birth rate.

**Live births** in Kyrgyzstan before 2004 were defined as the complete expulsion or extraction of infants from their mothers' bodies after 28 or more weeks of gestation (of infants at least 35cm in height and 1000g in weight), who drew at least one breath after separation from the mother's body. Since 2004 **live birth** has been defined as the complete expulsion or extraction from its mother of a product of conception, irrespective of the duration of pregnancy, which, after such separation, breathes or shows any other evidence of life, such as beating of the heart, pulsation of the umbilical cord, or any definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached.

The data provided allows for the analysis of the number of children born to women by age group, urban or rural residence, and region. The number of children differs greatly between urban and rural women and between regions.

**4.1. Female population 15 years of age and older, by age and number of children ever born alive by sex for area and major administrative divisions**

## 5. Educational characteristics

The data presented in this section report the educational attainment of the resident population disaggregated by age group and sex.

The population's educational attainment is classified as follows:

**Elementary:** Individuals who completed elementary school, which entailed three grades of primary school up to 1988: those who left in grades 4-6 from the 1962/63 academic year onwards; those who left in grades 4-7 between 1972/73 and 1988/89 academic years; or those who left in grades 4-9 in the 1989/90 academic year or later. It also includes those who were studying in grades 5-9 at the moment of the census;

**General (incomplete secondary):** Individuals who completed incomplete secondary school (seventh grade in 1961 and earlier; eighth grade in 1962-1989; ninth grade from 1990 and later), and those who graduated from basic secondary school (in 1993 and later). This category covers individuals who left in grades 8-10 (before the 1961/62 academic year), grades 9-10 (before the 1988/89 academic year), or grades 10-11 since 1990. It also includes those who were studying in grades 10-11 at secondary school or vocational school (lyceum) at the moment of the census;

**Secondary (complete) general:** Those who graduated from secondary general school (including intensive learning of individual disciplines), gymnasium or lyceum, and who received a general secondary school leaving certificate;

**Primary professional (vocational):** Those who graduated from an institution of primary professional education and who received a secondary universal school leaving certificate (students of professional (vocational) schools and lyceums);

**Secondary professional (specialised secondary):** Those who graduated from a secondary professional educational institution: a vocational school, a specialised professional school (with specialties such as healthcare, music, art or cooking), college, and so on, and who received diplomas;

**Incomplete higher professional (incomplete higher):** Those who were studying, had studied or received basic qualifications at a higher professional education curriculum, having completed at least half the full degree course; or

**Higher professional education:** Those who completed a full course at a higher professional educational institution (university, institute or academy), and who received a diploma or degree:

*A Bachelor* completed a programme of basic higher professional education (*four years*) in a certain field (graduates with intensive general and theoretical training and with a specialisation);

*A Specialist* mastered a programme of complete higher professional education in a certain specialty;

*A Master* completed a programme of full higher professional education in a certain field with intensive general theoretical training and with specialisation, including compulsory scientific and research study, and defence of a Master's thesis.

**Attendance at educational institutions** was defined as learning in a constantly-active, officially-registered educational institution or participation in a public or private training programme, for the purpose of systematic learning at any level of education.

Students who were educated in two educational institutions simultaneously are classified according to the highest (by type) educational institution.

**Comprehensive institutions of all types** provide comprehensive curricula of primary, general and secondary (complete) comprehensive education (including elementary, general and

secondary comprehensive schools, including those that include intensive learning of certain disciplines, lyceums and gymnasiums).

**A primary professional educational institution** is an educational institution which trains specialists in specific professions or occupations, in which students undergo professional training simultaneously with incomplete secondary education. These include vocational technical schools and vocational high schools.

**A secondary professional educational institution** is an educational institution which follows secondary professional educational curricula. These include, for example, healthcare and pedagogical vocational colleges.

**A higher professional educational institution** is an institution which follows higher professional education curricula (university, institute or academy).

**A post-graduate professional educational institution** (post-graduate school or PhD) is an institution which provides post-graduate and PhD programmes.

**Other schools (courses)** are schools or courses which do not provide comprehensive education. These would include re-training and refresher training, preparation courses attached to educational institutions, and courses providing professional training (for drivers, accountants, translators, and so on).

Data **about students and persons not attending educational institutions aged** from 6 to 28 years inclusive were presented by age and gender, both nationally and regionally (for each oblast) with disaggregation by urban or rural residence. This means that the proportions of the population aged 6 to 28 years inclusive who attend and do not attend educational institutions can be studied.

**5.1. Population 10 years of age and older by educational attainment, age and sex for area and major administrative divisions**

	Total population 10 years of age and older	Educational attainment						No elementary education	Of whom illiterate

## **6. Economic characteristics**

This section presents data on the economic activity of those aged 15 and older.

All the major indicators of economic activity and employment by main industries were given for territories, and disaggregated by urban or rural area, sex, age, and educational attainment. Those who are not employed and are not seeking employment were asked about the reasons for their economic inactivity.

Data on labour migrants was also disaggregated by main industry, territory, and place of current residence.

The **economically active population** is that part of the population which supplies labour for the production of goods and services. This group can be either employed or unemployed.

The **employed population** is made up of all persons who indicated employment-related income as their livelihood, and stated the main industry of the enterprise, institution, or organisation, as well as their positions or types of work performed.

Disaggregation of the employed population by main industry was undertaken based on the State Classification system for Types of Economic Activity.

**Labour migration** is temporary relocation of the economically-active population with the purpose of working in another country or region. Labour migration does not equate to a change in the place of permanent residence, but relates to an assumption that the travel is temporary for employment purposes, and that return to their place of permanent resident is intended.

The **unemployed population** comprises persons aged 15 and older who are not employed and have no occupation that provides an income, but who seek employment and are ready to work within the next two weeks. This group includes both persons registered with employment services and those seeking jobs independently.

Students and pensioners of able-bodied age were included in this category, if they had no occupations that provided incomes, were seeking jobs, and were ready to work.

The **economically inactive population** is made up of persons who have no jobs or occupations providing income and do not seek employment, i.e. they are inactive due to their study, household duties, old age pension, disability pension, or other reasons.

The Jogorku Kenesh (Parliament) of the Kyrgyz Republic adopted the Law “On the basics of public youth policy” on 25 June 2009. The **youth** covered by this Law are citizens of the Kyrgyz Republic and stateless persons aged **14 to 28**.

**Working age** is the set of ages in which a person is able to perform labour activity.

At the time of the census the working age in the Kyrgyz Republic was identified as 16-59 years for men, and 16-54 years for women.

**6.1. Resident population 15 years of age and over, by activity status,  
age and sex for area and major administrative divisions**

Map №3

## Urban and rural population 15 years of age and older by main industry

## 7. Households and families

The 2009 population and housing census in the Kyrgyz Republic had households as its basic unit.

A **private household** consists of one or several persons living together in a housing unit, who make common provision for food or other essentials for living. The persons in the group may pool their resources and have a common budget; they may be related or unrelated persons or a combination of persons both related and unrelated.

An **institutional (collective) household** consists of persons or groups of persons who permanently live in a housing unit intended for collective residence and eat together, but have no individual budgets or common consumer expenses. Further, they are subject to common rules and usually are not related. This group includes, among others, nursing homes, old people homes, children's homes, psychiatric institutions, and other in-patient treatment facilities intended for long-term residence, military barracks, and places of detention.

The homeless were also covered by the census.

In accordance with the Programme for Development of Publication Tables, this compilation only includes information on private households.

**Private households** are divided into households consisting of one person and households consisting of several persons. In turn, the latter is divided into:

- nuclear households, which are households consisting entirely of a single family nucleus.
- extended households, which are households consisting of: two or more family nuclei related to each other without any other persons; two or more family nuclei related to each other plus other persons related to at least one of the nuclei; a single family nucleus and other persons related to the nucleus; or two or more persons related to each other, none of whom constitute a family nucleus;.
- composite households, which are households consisting of: two or more family nuclei related to each other plus other persons, some of whom are related to at least one of the nuclei and some of whom are not related to any of the nuclei; a single family nucleus plus other persons, some of whom are related to the nucleus and some of whom are not; a single family nucleus plus other persons, none of whom is related to the nucleus; two or more family nuclei not related to each other, with or without any other persons; or non-related persons only.
- other households are households consisting of one homeless person or groups of homeless persons whether or not they have kinship relations with each other.

The average size of a private household is defined as the quotient of the population living in households divided by the number of households.

The **family** within the household is defined as those members of the household who are related, to a specified degree, through blood, adoption or marriage. Families can be classified as nuclear, extended or other:

- a nuclear family is defined as two or more persons who live in the same household and are related as a married couple with or without children, or as a parent with one or more unmarried child. The cases in which a grandchild or grandchildren usually live in the household of their grandmother or grandfather without a middle generation may also be included here. Meanwhile, children are defined as any persons not married, irrespective of age, who live with their parents and have no children of their own.

- an extended family consists of several nuclear families with kinship relations that live together, i.e. a family consisting of several nuclear families linked by kinship relations, any of which may be two- or one-parent families, and can also include relatives of spouses on the direct line or otherwise.
- other families are made up of two or more persons with kinship relations and living together. This type covers families such as brothers or sisters who live together without their own children or their parents, an aunt who lives with her childless niece, and so on.

## **8. Housing characteristics**

In 2009, for the first time, the Kyrgyz Republic conducted a housing census alongside the population census.

The principal units of enumeration of the 2009 housing census were the living quarters.

The living quarters are a housing unit and spaces for collective habitation.

Housing units are usual places of abode.

A **conventional dwelling** is defined as a place of habitation of one or more persons intended for habitation made up of a room or suite of rooms and its accessories in a permanent building or a structurally separated part thereof.

A permanent building is understood to be a structure not intended to be moved and that may be expected to maintain its stability for 15 years or more. One of the criteria of stability is the material used to construct the buildings' outside walls, which was to be identified in the course of census.

The term semi-permanent housing unit refers to a structure that, by the way it has been constructed or the material used, is not expected to maintain its durability for a long period of time, but has some of the main features and facilities of a conventional dwelling.

**Conventional dwellings** were classified in the following groups in the census:

- a detached house;
- part of a detached house;
- an individual apartment;
- a collective (communal) apartment; or
- a room or apartment in a dormitory.

The above-mentioned types of conventional dwelling were subject to enumeration regardless of whether or not they were permanently occupied at the time of the census.

**Housing stock** is the pool of all conventional dwellings (premises) irrespective of the type of ownership and occupancy at the moment of the census.

In addition, the census also collected information of other housing units and premises for collective habitation.

**Other housing units** include:

- holiday houses;
- hotel rooms;
- other dwelling places (including temporary housing): huts, cabins, shacks, caravans and other shelters);
- other non-residential premises used for human habitation (garages, tents, kiosks, offices, stables, barns, shops or institutions, and others adapted for habitation).

Other housing units for human habitation. This category covers spaces which do not have all the characteristics of conventional dwellings, but are considered suitable for the climate and constructed with local materials for seasonal or temporary living. It can include:

- permanent buildings, which would include summer houses, and hotel rooms;

- semi-permanent buildings, which include huts, summer kitchens, shacks, and cabins.

Other housing units not intended for human habitation. This category covers those spaces which were not constructed for human habitation, but nevertheless in practice were inhabited at the time of the census, and were located in:

- permanent buildings, which would include rooms in buildings intended for livestock, shops, institutions, or other places adapted for habitation; or
- - semi-permanent buildings, which include garages, tents, kiosks, and other spaces adapted for habitation.

#### **Collective living quarters were defined as:**

- a part (ward or room in a children's home, orphanage, boarding school for orphans and children without parental care, old people's home, residential institution for persons with disabilities, hospital, or other social institution);
- a barracks or room for military conscripts, or a place of detention.

It is important to stress, that other housing units and premises for collective habitation were enumerated only if and when they were occupied for permanent habitation at the point of the census.

Based on census data, households occupy places of residence in the following types of ownership:

- **private ownership:** privatised and purchased apartments and houses, apartments in cooperative blocks with shares completely paid off, privately-owned apartments in cooperatively-owned blocks, and apartments and houses purchased in other ways);
- **public ownership:** owned by the Kyrgyz Republic, and administrated or managed by state enterprises or institutions;
- **municipal (communal) ownership:** administrated by local self-government bodies or managed by municipal enterprises, institutions or organisations;
- **ownership by legal entities** (established as private owners), constructed or purchased at their expense, including at the expense of housing-construction cooperatives whose share is not yet paid off in full.

In addition, households living in premises rented from private owners were enumerated.

In formation on the following **facilities** available to the households were collected during the census of housing units:

- electricity, if mains electric supply is available;
- electric cooker, if a free-standing electric cooker is available. A house with a separate kitchen equipped with a free-standing electric cooker installed is also considered a housing unit equipped with an electric cooker;
- stationary gas cooker, if a stationary free-standing gas cooker is available;
- network gas (natural), if a fixed free-standing gas cooker supplied with network (natural) gas is available;
- liquefied gas (in cylinders), if there is a fixed free-standing gas cooker supplied with liquefied gas from a cylinder;
- centralised heating, if heating is supplied by a heating and electric plant;

- heating by a boiler, if heating is supplied by a local-area boiler or a boiler installed for the building;
- heating by individual boilers, if low-capacity local installations, heaters or boilers supplied with electricity, gas, solid or liquid fuel, or other modern heating devices, are available;
- stove heating, if the source of heating is a stove or several stoves;
- other types of heating, if the source of heating is water supplied from hot springs, gel batteries, and so on;
- bath or shower, if a bath or shower is installed either in a separate bathroom or in another place adapted for these purposes irrespective of the mode of hot water supply;
- piped water within the building, if the dwelling has an indoor water supply distribution network, to which water is supplied year-round from a centralised water supply system or artesian well;
- outdoor water supply system, if a water intake column is available in the yard and there is no indoor water supply, and if water is not supplied centrally year-round from a water supply system or an artesian well;
- network sewage system, if an indoor sewage pipe is available to drain domestic sanitary sewage to a street sewage system or to absorbing wells;
- toilet available (flush), if indoor flush toilet is available and water diversion is performed through a pipe system into a cesspit;
- centralised hot water supply from a specialised water supply system that ensures hot water is supplied to dwellings to meet the domestic needs of residents;
- hot water supply provided by individual water heaters, if a special water supply system is available which supplies hot water from gas-powered water heaters or apartment water boilers, including small capacity boilers, for the domestic needs of residents.

**A conventional dwelling with all basic facilities** is a housing unit (a room or suite of rooms) which meets all the needs of the household living there in and has all the essential elements such as being constructed in a permanent building; has a separate exit to the street or to a commonly used space; is intended for household habitation, as well having additional facilities such as piped water, toilet, indoor stationary bathroom or shower, as well as a kitchen or another place for cooking food within the dwelling space.

**A conventional dwelling without all basic facilities** is a housing unit with all the essential elements of a conventional dwelling, **but is without all** the basic facilities.

NATIONAL STATISTICAL COMMITTEE  
OF THE KYRGYZ REPUBLIC

**POPULATION AND HOUSING CENSUS  
OF THE KYRGYZ REPUBLIC of 2009**

**Form 1**  
Approved by decision of the Government of the  
Kyrgyz Republic  
Dated May 26, 2007 № 195

### **ENUMERATION LIST – LIST OF RESIDENTS**

#### **DEAR ENUMERATOR!**

Population and Housing Census of the Kyrgyz Republic was implemented according to the Decree of the President of the Kyrgyz Republic from December 29, 2005 № 661 and the Law of the Kyrgyz Republic from April 19 2008 № 59 “On Population and Housing Census”, which are defined that Population Censuses are compulsory and respondents can not refuse to provide required data on questions included in census documentation. In case of refusal they have responsibility for non-responses according to the legislation of the Kyrgyz Republic.

The personal data from Population and Housing Census are confidential, nonpublic and protected according to the legislation of the Kyrgyz Republic. Census staff is prohibited from informing the content of filled in census documentation. According to the legislation of the Kyrgyz Republic, census staff is responsible for non-breaking the order of using personal data on citizens. In case of having questions during filling in the census documentation, please use Instruction for enumerators on filling in census documentation.
